

## ezpz Tiny Cup

Your little one can start drinking from an open cup as early as 6 months of age. It is important to practice these skills. Small amounts of water can be offered in an open cup as soon as they start eating solids. The silicone protects baby's developing teeth. It is small for little hands and suitable for cold and warm liquids. The open cup activates lip closure and tongue elevation for proper drinking. Straw cups or munchkin 360 cups are also a great option, as they are appropriate for supporting motor oral development, however they usually can't master the use of these cups until 8-10 months of age.

## ezpz Mini Mat

Silicone feeding mats or plates with suction allows for more contained mess and cleans up so easily. They also stick to the table to prevent your little one from throwing their plate when they are no longer interested in mealtime.

## Num Num Prespoon (GOOtensil)

One of my favourite products to practice utensil use. It allows your baby to dunk the spoon into a mixture and still pick up the mashed item, no scooping necessary. It also catches some of the food, so it isn't constantly falling or being flung off. It is the perfect size in length and makes for a great teething tool as well.

## Silicone Bib with Catcher

Self-feeding can be super messy. The food will still get everywhere, but having some caught in a bib is helpful.

## Steamer (Stainless or Silicone)

Great for cooking meats and veggies in a way that creates the perfect soft texture. It can also be used for the entire family.

## Bumkins Chewtensils

Great first utensils. The sizing is perfect for little hands and the silicone makes them soft and perfect for teething babies.

## Silicone Feeder

This is one my personal favourites. It is especially helpful when first introducing solids. You can place all sorts of food in the feeder so that they are getting small amounts, practicing sucking, biting, and holding. The little holes also allow small and safe amounts of food to be removed, so they are eating too. This is perfect for slippery foods like some fruits (mango, peaches etc.) or even freezing purees and offering as a teething soother.

## Highchair (must have a footrest)

Having a footrest provides support and allows your child to focus on learning to bite, chew, and eat. The footrest will help strengthen your child's motor skills allowing them to feed better with improved concentration.

### Favourite High Chairs
